

P1.54

SHEAR STRESS MEASUREMENT

Using the field inspection vane tester the shear stress at the surface of a soil sample can be determined.

The determination of the shear strength at the bottom of a pre-drilled borehole in cohesive soils.

BENEFITS

14.05 Field inspection vane tester

- Perfect kit for all those measuring in top soils
- Ideal for agronomists, civil engineers
- Small but sensitive and accurate
- Drag ring for easy read-out
- Dummy used for zero measurement

The shear strength or stress of the soil depends on different soil characteristics such as for instance: the granular composition, the humus content, the humidity and (in case of vegetation covered areas) the degree of coverage and the density of the roots. In order to determine the shear stress in the strata in for instance a profile pit, on the surface (for instance a sports terrain), at the bottom of a borehole or in a sample, several different shear stress meters have been developed.

The principle of the shear stress meters is simple: an axle with vanes (or fins) connected to it is placed in the soil vertically after which it is turned around with a certain speed and force.

The force required is measured at the breakpoint of the soil and from this the shear stress at the location of the measuring point can be calculated. Depending on the type of soil different vanes can be applied.

14.05 Field inspection vane tester, standard set for measurement up to 200 kPa (20 t/m²) to a depth of 3 m

The field inspection vane tester can be used to determine the maximum shearing force that can be exercised on a soil. Measurement in the field (on the surface, in profile pits or at the bottom of bore holes) as well as in the laboratory (on samples) are possible.

The shear stress measured can be read on a clearly readable scale ring.

In soft soils it is not necessary to make a borehole first. In order to determine the friction on the extension rods a dummy vane is available in these situations.

The standard set contains, among other items: a field inspection vane tester, complete with three vanes (16 x 32, 20 x 40 and 25.4 x 50.8 mm) and a dummy vane, various extension rods, spanners and a solid carrying bag.

SHEAR STRESS MEASUREMENT

P1.54

14.08 Field inspection vane borer, standard set for measurement up to 160 kPa (16 t/m²) and a depth of 10 m

The robust field inspection vane borer is a somewhat heavier tool for measuring the shear strength in the field.

Without pre-drilling a hole the vane can be pushed or hammered into the soil. If the soil is too hard, then it is recommended to pre-drill a hole. Measurements can be executed up to a depth of 10 meter and a shear strength can be measured to a maximum of up to 160 kPa (16 t/m²). Because of its unique 180° slip coupling this type of vane tester can be used to measure the friction and the shear strength of the rods direct and separately.

The standard set contains, among other items: the measuring body, two vanes (60x120 mm and 75.8x151.5 mm), various extension rods, spanners, accessories and a carrying case. Optionally available is an extractor.

Measuring body robust vane tester

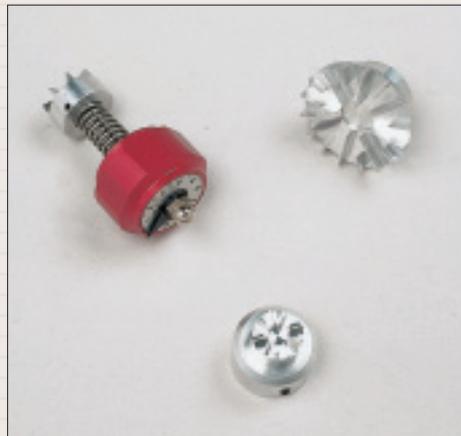

14.10 Pocket vane tester for measurement up to 250 kPa (2.5 kg/cm²)

The pocket vane tester is a shear strength measuring tool that is used in profile pits or on the surface. The small, practical format also makes the tool very suitable for testing on soil samples.

The short period of time the test takes allows for several measurements in the same soil or layer which in turn allows for the calculation of an average value. The shear strength can be read from a scale fitted with dragging pointer.

Conditions for correct measurement are: a flat surface, care placing of the vanes in the soil and turning the meter with a constant (relaxed) speed.

The pocket vane tester is supplied inclusive of note pad, carrying bag and 3 vanes with a measuring range of respectively 0 - 0.2 / 0 - 1 and 0 - 2.5 kg/cm².

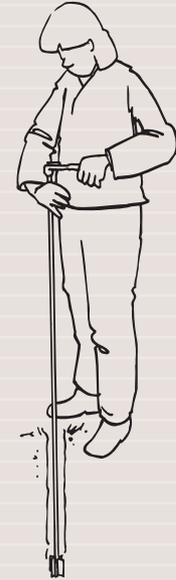

Pocket vane tester

Field inspection vane borer set

Measuring the shear strength in a borehole with the field inspection vane borer.

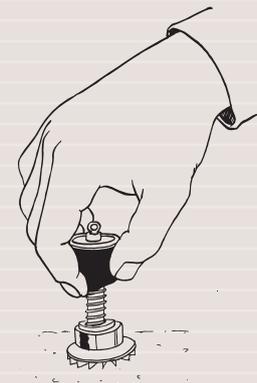

BENEFITS

14.08 Vane borer

- Rod and vane measurement in one simple go
- Sturdy construction for larger depths

The shear strength in a sample is determined with the pocket vane tester.

BENEFITS

14.10 Pocket vane tester

- Shear stress indicator for samples / profiles
- Suits the needs of pedologists and geologists
- Three rings for a wide measuring range

PARTS LIST

Art.no.	Description	Qty. in set	Art.no.	Description	Qty. in set
Shear stress measurement (P1.54)			01.04.00.10.C	Riverside auger, bottom part, c.sc., Ø 10 cm	
	For shear stress measurements of soil three different instruments are supplied:		01.10.10.01.C	Handle, normal, 60 cm, c.sc.	
	- light weight vane tester		01.10.12.C	Extension rod, 100 cm, c.sc.	
	- robust vane tester			Note: in heavy circumstances it is recommended to use mechanical rod pullers.	
	- pocket vane tester			Available on request	
14.05	Field inspection vane tester, standard set for measurements to 200 kPa (20 t/m²) and a depth of 3 m, complete with 3 vanes (16x32 mm, 20x40 mm and 25.4x50.8 mm), dummy vane, extension rods, tools and carrying bag		14.10	Pocket vane tester, with 3 vanes, measuring range 0-0.2, 0-1 and 0-2.5 kg/cm², incl. notebook and carrying case	
**14.05.01	Field inspection vane tester, standard set for measurements to 200 kPa (20 t/m ²), complete with 3 vanes (16x32 mm, 20x40 mm and 25.4x50.8 mm) and dummy vane, excl. extension rods and carrying bag	1			
**14.05.02	Extension rod, stainless steel length 50 cm	6			
**14.05.05	Carrying bag for vane tester	1			
	Accessories to pre-drill a hole in hard soils:				
01.04.00.07.B	Riverside auger, bottom part, bay, Ø 7 cm				
01.10.01.B	Handle, normal, 60 cm, bay. (incl. coupling sleeve)				
01.10.07.B	Extension rod, 100 cm (incl. coupling sleeve) bay.				
14.08	Field inspection vane borer, standard set for measurements to 160 kPa (16 T/m²) and a depth of 10 m. Complete with 2 vanes (60x120 mm and 75.8x151.5 mm), extension rods, spanner and other accessories in aluminium transport case (excl. hammer and extractor)				
**14.08.01	Field inspection vane borer, standard set for measurements to 160 kPa (16 T/m ²) and a depth of 10 m. Complete with 2 vanes (60x120 mm and 75.8x151.5 mm), extension rods and other accessories. Excl. transport case and extractor	1			
**99.50.12	Spanner 12x13 mm	2			
**01.11.02	Aluminium transport case, dim. 108x23x14 cm (outside)	1			
**01.11.02.01	Padlock	1			
	Optional item:				
14.08.15	Extension rod, Ø 25 mm, length 1 m, M18 screw thread connection				
	Accessories to pre-auger a hole in hard soils:
